

**EDITORIAL:**

The mission of the Health and Society (H&S) is to produce relevant academic content that allows the deepening of discussions involving the theme of health and society. The purpose of H&S is to stimulate debate and interdisciplinary scientific production, in order to inform society and produce new knowledge. The target audience of our journal are post-doctoral students, doctors, master's students and post-graduate students. Thus, authors must have a cited title or pursue a postgraduate course. In addition, H&S will accept co-authored participation.

The H&S submission policy will receive scientific articles with a minimum of 5,000 and a maximum of 8,000 words and critical reviews with a minimum of 5 and a maximum of 8 pages. The receipt of the works will occur mainly with the opening of the Call for Papers, in which the papers will be distributed in 5 (five) annual publications between the months of April, May, July, September and December. Our evaluation policy is designed to follow the criteria of novelty, reasoned discussion and covered with revealing theoretical and practical value. The journal will give preference to receiving articles with empirical research, not rejecting other methodological approaches. All papers must deal with interdisciplinary analyzes that involve themes of varied approach and that generate an academic and social reflection. In this way, the articles will be analyzed for merit (in which it will be discussed whether the work fits H & S's proposals) and formatting (which corresponds to an assessment of English or Spanish).

The analysis time of each work will be around one month after the deposit on our website due to the opening of the publication notice. The process of evaluating the article in the journal occurs initially when submitting articles without mentioning the author (s) and / or co-author (s) at any time during the electronic submission phase. The data is cited only for the system that hides the name (s) of the author (s) or co-author (s) from the evaluators, in order to render the evaluation impartial. The editor's choice is made by the editor according to the training area in the undergraduate and graduate courses of the evaluating professor with the theme to be addressed by the author (s) and / or co-author (s) of the article evaluated. After the evaluation, without mentioning the name (s) of the author (s) and / or co-author (s), a letter of acceptance, acceptance with alteration or rejection of the article is sent by the evaluator. sent depending on the opinion of the evaluator.

The next step is the elaboration of the letter by the editor with the respective opinion of the evaluator (a) for the author (s) and / or co-author (s). Finally, if the article is accepted or accepted with suggestions for changes, the author (s) and / or co-author (s) are informed of the respective deadlines and addition of their data (s), as well as the academic qualification. The journal offers immediate and free access to its content, following the principle that the free availability of scientific knowledge to the public provides greater worldwide democratization of knowledge. Indexing system, databases and directories The system automatically generates some indexing or metadata (such as magazine title, date, URL, etc.). Metadata, or data on data, is a set of terms that describe the document or data of the Edition, thus being able to use comparative indexing terms for the same purpose. In addition, in order to generate greater credibility to the authors' works, the registration of each article is generated through the generation of a DOI (Digital Object Identifier) in order to authenticate the administrative base of digital content, assisting in the localization and accessing materials on the web and facilitating document authentication.
